**Glossary**

**Industry output** is the total value of production or service by industry for a given time period.

**Employment** includes full-time and part-time employees, and self-employed.

**Labor income** includes wages, salary, and benefits of employees as well as income for self-employed individuals.

**Direct effects** refer to the sector’s own production, value-added, employment, and labor incomes.

**Indirect effects** refer to the economic activities in other sectors impacted by the forest sector’s purchase of goods and services.

**Induced effects** are economic activities from consumption of goods and services using incomes generated from the direct and indirect effects.

**SAM** is the acronym for Social Accounting Matrices, a macro accounting system widely used by many counties for analyzing relationships of economic activities such as production, consumption, and trade between various economic entities.

**Direct economic impact** of a sector includes only direct effects.

**Total economic impact** of a sector includes all three effects generated by the sector.
